

# TCHIBO Manufacturing Restricted Substances List (MRSList V4.0) - Implementation Guidance

Responsible handling of chemicals (including purchase, use and disposal) must be implemented at any steps of supply chains.

Detection limits have not been tested and compared extensively yet for each of the hazardous substances groups. Therefore research is required and more knowledge has to be gained before the limit values determined in this MRSList can become mandatory for the supply chains. Tchibo has committed to phase out discharges and losses of hazardous chemicals from the production and the products until 2020. Phase out means step by step elimination "not detectable to the limits of the best current technology". To systematically phase out hazardous chemicals, the current laboratory and analytical technologies must be reproducible and comparable for each media or material which is subject to analysis.

Background levels (anthropogenic or natural) as well as best current technologies derived from waste water legal requirements will be considered in the revisions of this document.

Detection limits have not been tested and compared extensively yet for each of the hazardous substances groups in chemical inputs by the international chemical industry. Therefore research is required and more knowledge has to be gained before the limit values determined in this MRSList can become mandatory for the supply chains. Tchibo will engage in stakeholder initiatives to gain knowledge on the appearance of traces of hazardous substances in chemicals, analytical methods and detection limits for chemical formulations. Target of this engagement is the phase out of hazardous chemicals until 2020 by the international chemical industry. As a minimum requirement chemical inputs must comply with the MRSList values as stated in the MRSList of ZDHC/ German Partnership for Sustainable Textiles.

Detection limits have not been tested and compared extensively yet for each of the hazardous substances groups in final products. Therefore research is required and more knowledge has to be gained before the limit values determined in this MRSList can become mandatory for the supply chains. Detection limits of hazardous chemicals tested by accredited laboratories may vary between different labs and/or standards for certain materials. Additionally, methods might not be developed yet. Best current laboratory and analytical technologies must be reproducible and comparable for each product or material which is subject to analysis. Tchibo will work closely together with the accredited laboratories to work towards reproducible and comparable results according to best current technologies.

Substance group	Substance name	CAS No.	Method: Input: Chemical Formulation	Method: Output: Waste Water	Method: Output: Sludge	Status: banned ****
<b>Alkylphenol (AP) and Alkylphenol Ethoxylates (APEO): including all isomers (No intentional use)</b>

<b>Dyes and Pigments - Azo (Forming Restricted Amines) and further threshold limits on impurities</b>						
(The following substance group is not expected to be used intentionally in the production of textiles. Tchibo will engage in stakeholder initiatives towards the reduction/ phase out of contaminations of the substances in production.) To avoid the use of colourants in production, which are known to release carcinogenic aromatic amines, suppliers shall forward the IFOP list (2001) to their chemical suppliers as guidance. ( <a href="http://www.tegewa.de/uploads/media/Azodyes_pursuant_to_TRGS_614_TEGEWA.pdf">http://www.tegewa.de/uploads/media/Azodyes_pursuant_to_TRGS_614_TEGEWA.pdf</a> )						
A recommendation for threshold limits for further relevant organic impurities like Quinoline, PCB, Dioxins and Furans is given in the "ETAD recommendation for threshold limits on impurities in dyes (2014)" ( <a href="http://etad.com/en/publications.html">http://etad.com/en/publications.html</a> ).						
Legally restricted amines e.g. Annex XVII (REACH), GB18401-2010	4-Aminodiphenyl	92-67-1	each 150 ppm (LC/ GC)	With reference to EN 14362:1&3 and followed by gas chromatographic – Mass Spectrometric (GC- MS) and high Performance Liquid Chromatographic (HP LC) analysis  DIN EN 14362	EN 14362 modified GC/MS resp. Heavy metals and Inorganic compounds											
Listed compounds are banned from intentional use in textile manufacturing/finishing. Additionally, residual traces of metals in dyestuff and pigment mixtures are expected to comply with the Ecological and Toxicological Association of Dyes and Organic Pigments Manufacturers (ETAD) concentration limits ( <a href="http://www.etad.com/">http://www.etad.com/</a> ). Tchibo further will engage in stakeholder initiatives towards the reduction/ phase out of the metals and their compounds in production.											
Heavy metals and Inorganic compounds	Chromium VI (Cr VI)	18540-29-9	10 ppm (ICP-OES, AAS)	Digestion, ICP analysis EPA 7196 A, EPA 7199	Digestion, ICP analysis EPA 7196 A	banned

**** Definition												
banned	Banned substances shall not be used intentionally in the production of Tchibo articles.											
grey marked substances = substances that go <b>beyond</b> the ZDHC MRSL/German Partnership for sustainable textiles MRSL. These are additional substances that are either regulated by law or by the Tchibo requirements.												
tbd: to be determined
